Tuesday 02:15 PM - 3:50 PM

6 prog. assignments + project

Final exam

Course Materials

Description

This course will introduce you to deep learning approaches that are used in cutting-edge research in computer vision and provide practical experience:

- Using of neural networks (fully connected and convolutional layers, forward and backward propagation, activation functions, ...)
- Training of neural networks (initialization, optimization, regularization, model choice, ...)

Prerequisites

- Basic familiarity with Python 3.
- An understanding of fundamental concepts in linear algebra and probability.

Grading

30% Programming assignments (5% each)
40% Project
30% Final exam

Note! The requisition of admission to semester control (final exam) is

Programming assignments + Project $\geq 42\%$

The [Igor Sikorsky Kyiv Polytechnic Institute](#) rating scale:

A = 95–100	Excellent
B = 85–94	Good
C = 75–84	
D = 65–74	Satisfactory
E = 60–64	
F < 60	Fail
Fx < 42	
Violation of the Honor Code	Removed

Honor Code

You may discuss the programming assignments in groups. However, each student must write down their own solutions independently.

You are obligated to follow the Igor Sikorsky Kyiv Polytechnic Institute [Honor Code](#) and all of the following rules in this course:

1. You must submit solutions, reports or program code that are your own. The usage of solutions or program code that are not your own and presenting them for one's own work is plagiarism and a serious violation of the basic academic standards.
2. You must not share your solution code with other students, nor ask others to share their solutions with you.
3. You must indicate on your submission any assistance you received.

The Perceptron: Forward Propagation

“The search for truth is more precious than its possession.”

– Albert Einstein (1879 - 1955)

Programming Assignment

Complete the programming assignment provided by the link:

https://github.com/YKochura/cv-kpi/blob/main/homeworks/lab2-3/Logistic_regression.ipynb.

You need to implement several functions for forward and backward propagation of a single training example of logistic regression. The functions that need to be implemented are marked in the task as follows:

```
1 # TODO
```

Your functions implementations, please, put in between

```
1 # BEGIN_YOUR_CODE
2
3 # END_YOUR_CODE
```

Evaluation

The programming assignment is worth a total of 10 points.

Submission

Submit your solutions at: <https://cloud.comsys.kpi.ua/s/Z3YcCRNpcz5t8WT>

Please, upload the following notebook with your solutions (First name, Last name and Group info, please, replace on relevant):

First name_Last name_Group_Logistic_regression.ipynb

Deadline: due at 11:59 PM, Thursday, November 4

Note! Assignments that will be completed after the deadline will be evaluated no more than 50% of the maximum point.
